# Flour Milling <br> Continuous Single Shaft Mixers WAH 

## Description

WAH is a Continuous Horizontal Single Shaft Mixer suitable for dry bulk solids (powders, granules, short fibres), dry bulk solids + liquids (conditioning \& granulating), sludges and pastes. WAH Mixers operate on the principle of a mechanically generated fluid bed. Ploughshare or shovel-shaped mixing tools rotate close to the horizontal, cylindrical drum casing lifting the components to be mixed from the product bed into the open mixing area. The quality of the mixture is achieved before the product reaches the mixer outlet.

## Function

The particular shape, position and rotation speed of the mixing tools, creates a centrifugal vortex motion, which allows the products to be projected in a three-dimensional way and to merge with each other.
This ensures that components with different particle size and bulk density are perfectly blended and mixed with high precision within the shortest possible time.

## Application

Usually for blending different types of flour or mixing flour with additives.

## Benefits

Maximum mixing homogeneity;
High speed mixing (short mixing time);
Low material residue;
Minimum wear/low maintenance;
$\checkmark$ Easy access to all internal parts of the mixer.

## Flour Milling

## Continuous Single Shaft Mixers WAH

## Technical Features / Periormance

- From 75 up to 15,000 litres gross volume
- Different construction materials
- Different types of mixing tools

## Overall Dimensions

|  | A | B | C | $50 \% \bigcirc \mathrm{dm}^{3} / \mathrm{h}$ <br> Residence Time |  | Empty Weight |
